

Para realizar esta actividad requerirás aproximadamente 50 minutos.

Actividad: DIY Harry Potter Magic Wand

Descripción: a continuación, encontrarás la información necesaria para elaborar tu propia varita mágica al estilo Harry Potter. Como seguramente sabes, existen muchos tipos de varitas; algunas son muy sobrias mientras otras tienen diseños muy elaborados y muchos detalles. Deja que tu creatividad fluya y muestra tus habilidades mágicas.

1. Match the words to their meaning:

- | | |
|--------------------------|--|
| a) chopsticks | <input type="checkbox"/> capable of being stretched or bent into different shapes. Capable of being easily changed or influenced. |
| b) (hot) glue | <input type="checkbox"/> a small raised area on a surface |
| c) layer | <input type="checkbox"/> to explore ideas that are creative and unusual and that are not limited or controlled by rules or tradition |
| d) build up | <input type="checkbox"/> a small, usually round piece of glass, wood, stone, etc. |
| e) weathering | <input type="checkbox"/> to develop gradually by increments |
| f) bumps | <input type="checkbox"/> the physical disintegration and chemical decomposition of the color, texture, composition, or form of exposed objects |
| g) beads | <input type="checkbox"/> either one of a pair of thin sticks that are used especially by people in Asia to pick up and eat food. |
| h) moldable | <input type="checkbox"/> a substance used to stick things tightly together |
| i) think outside the box | <input type="checkbox"/> a covering piece of material or a part that lies over or under another |

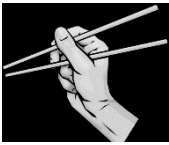

2. Watch the video in the link below and complete the instructions you have to follow in order to create your own wand. Use the words in the box to complete the instructions.

1. Get a chopstick. If you are making this for a teen or an _____, consider getting one of those 15-inch (38.1 centimeters) bamboo cooking chopsticks. Don't worry about the color; you will be painting it later on!

Can't find a chopstick? You can try using a long, wooden paintbrush instead. Just snap the brush part off, just below the metal crimp. You can also saw it off using a hacksaw.

2. Use a hot glue _____ to build up the handle, if desired. The handle should be about the length of your finger. Cover the handle area with hot glue let it harden. Add 2 to 3 more layers, if needed.

To create a wand like Harry's, draw vertical lines to make the handle. Make them thicker at the base of the wand, and thinner towards the other end of the handle.

3. Use hot glue on the rest of the wand. Some wands are plain, but other wands, such as Hermione Granger's, have _____ on the rest of the wand. You can use the hot glue to draw vines, squiggles, or spirals. You can create a neat design just by twirling your wand in your fingers while drawing a line.

4. _____ a beads, ornaments or buttons. Some wands have a fancier handle base. If you'd like yours to have one too, you can hot glue a small bead or fancy button to the base of your wand. The bead or button should be the same width as your wand.

Think about the bead or button's design and don't worry about the color. You will be painting this. You can always leave the bead or button unpainted, especially if it is a pretty crystal one!

5. _____ the wand a base color using acrylic paint. Most wands will be some shade of brown, but the Harry Potter movies also had wands that were white or black. You can even paint your wand different shades of one color to make it look more like wood.

6. Add some _____ using lighter and darker shades of your base color. Take the darker shade, and use it to fill in any nooks and crannies on your wand. You can use a q-tip or a pointy brush to get to those hard-to-reach areas. Then, take your lighter shade, and use it to highlight all of the raised areas.

If your wand is black, you will only need the highlights. If your wand is white, you will only need the shadows.

7. _____ the wand with a clear, acrylic sealer to make the paint last longer. Bring the wand outside and set it down on a sheet of paper. Spray it with some clear, acrylic sealer, and wait for it to dry. When the wand dries, turn it over, and spray the other side. Repeat this step, if necessary.

Sealing the wand is not absolutely necessary, but it can make the paint job last longer. You can use a matte, satin, or glossy finish.
